100 WORD DESCRIPTION

The Biology of Belief is a groundbreaking work in the field of New Biology. Author Dr. Bruce Lipton is a former medical school professor (University of Wisconsin) and research scientist (Stanford University School of Medicine). His experiments examined in great detail the processes by which cells receive information. In this book Dr. Lipton discusses the radical implications of his research and that of other leading-edge scientists that will radically change our understanding of life. Genes/DNA do not control our biology. DNA is controlled by extra-cellular signals, including the energetic messages emanating from our positive and negative thoughts. By retraining our minds to create healthy beliefs, we can change the physiology of our trillion-celled bodies. Dr. Lipton's profoundly hopeful synthesis of the latest and best research in cell biology and quantum physics is being hailed as a major breakthrough in our awareness of how our cells, our bodies and our minds work.
